

# Moving beyond the box score: 3 questions for franchise strategists

Basic stats tell you who won. Complex queries tell you why. This analysis focuses on three strategic pillars:

1. How are run-scoring ceilings expanding?

2. Does the toss dictate match outcomes as much as fans think?

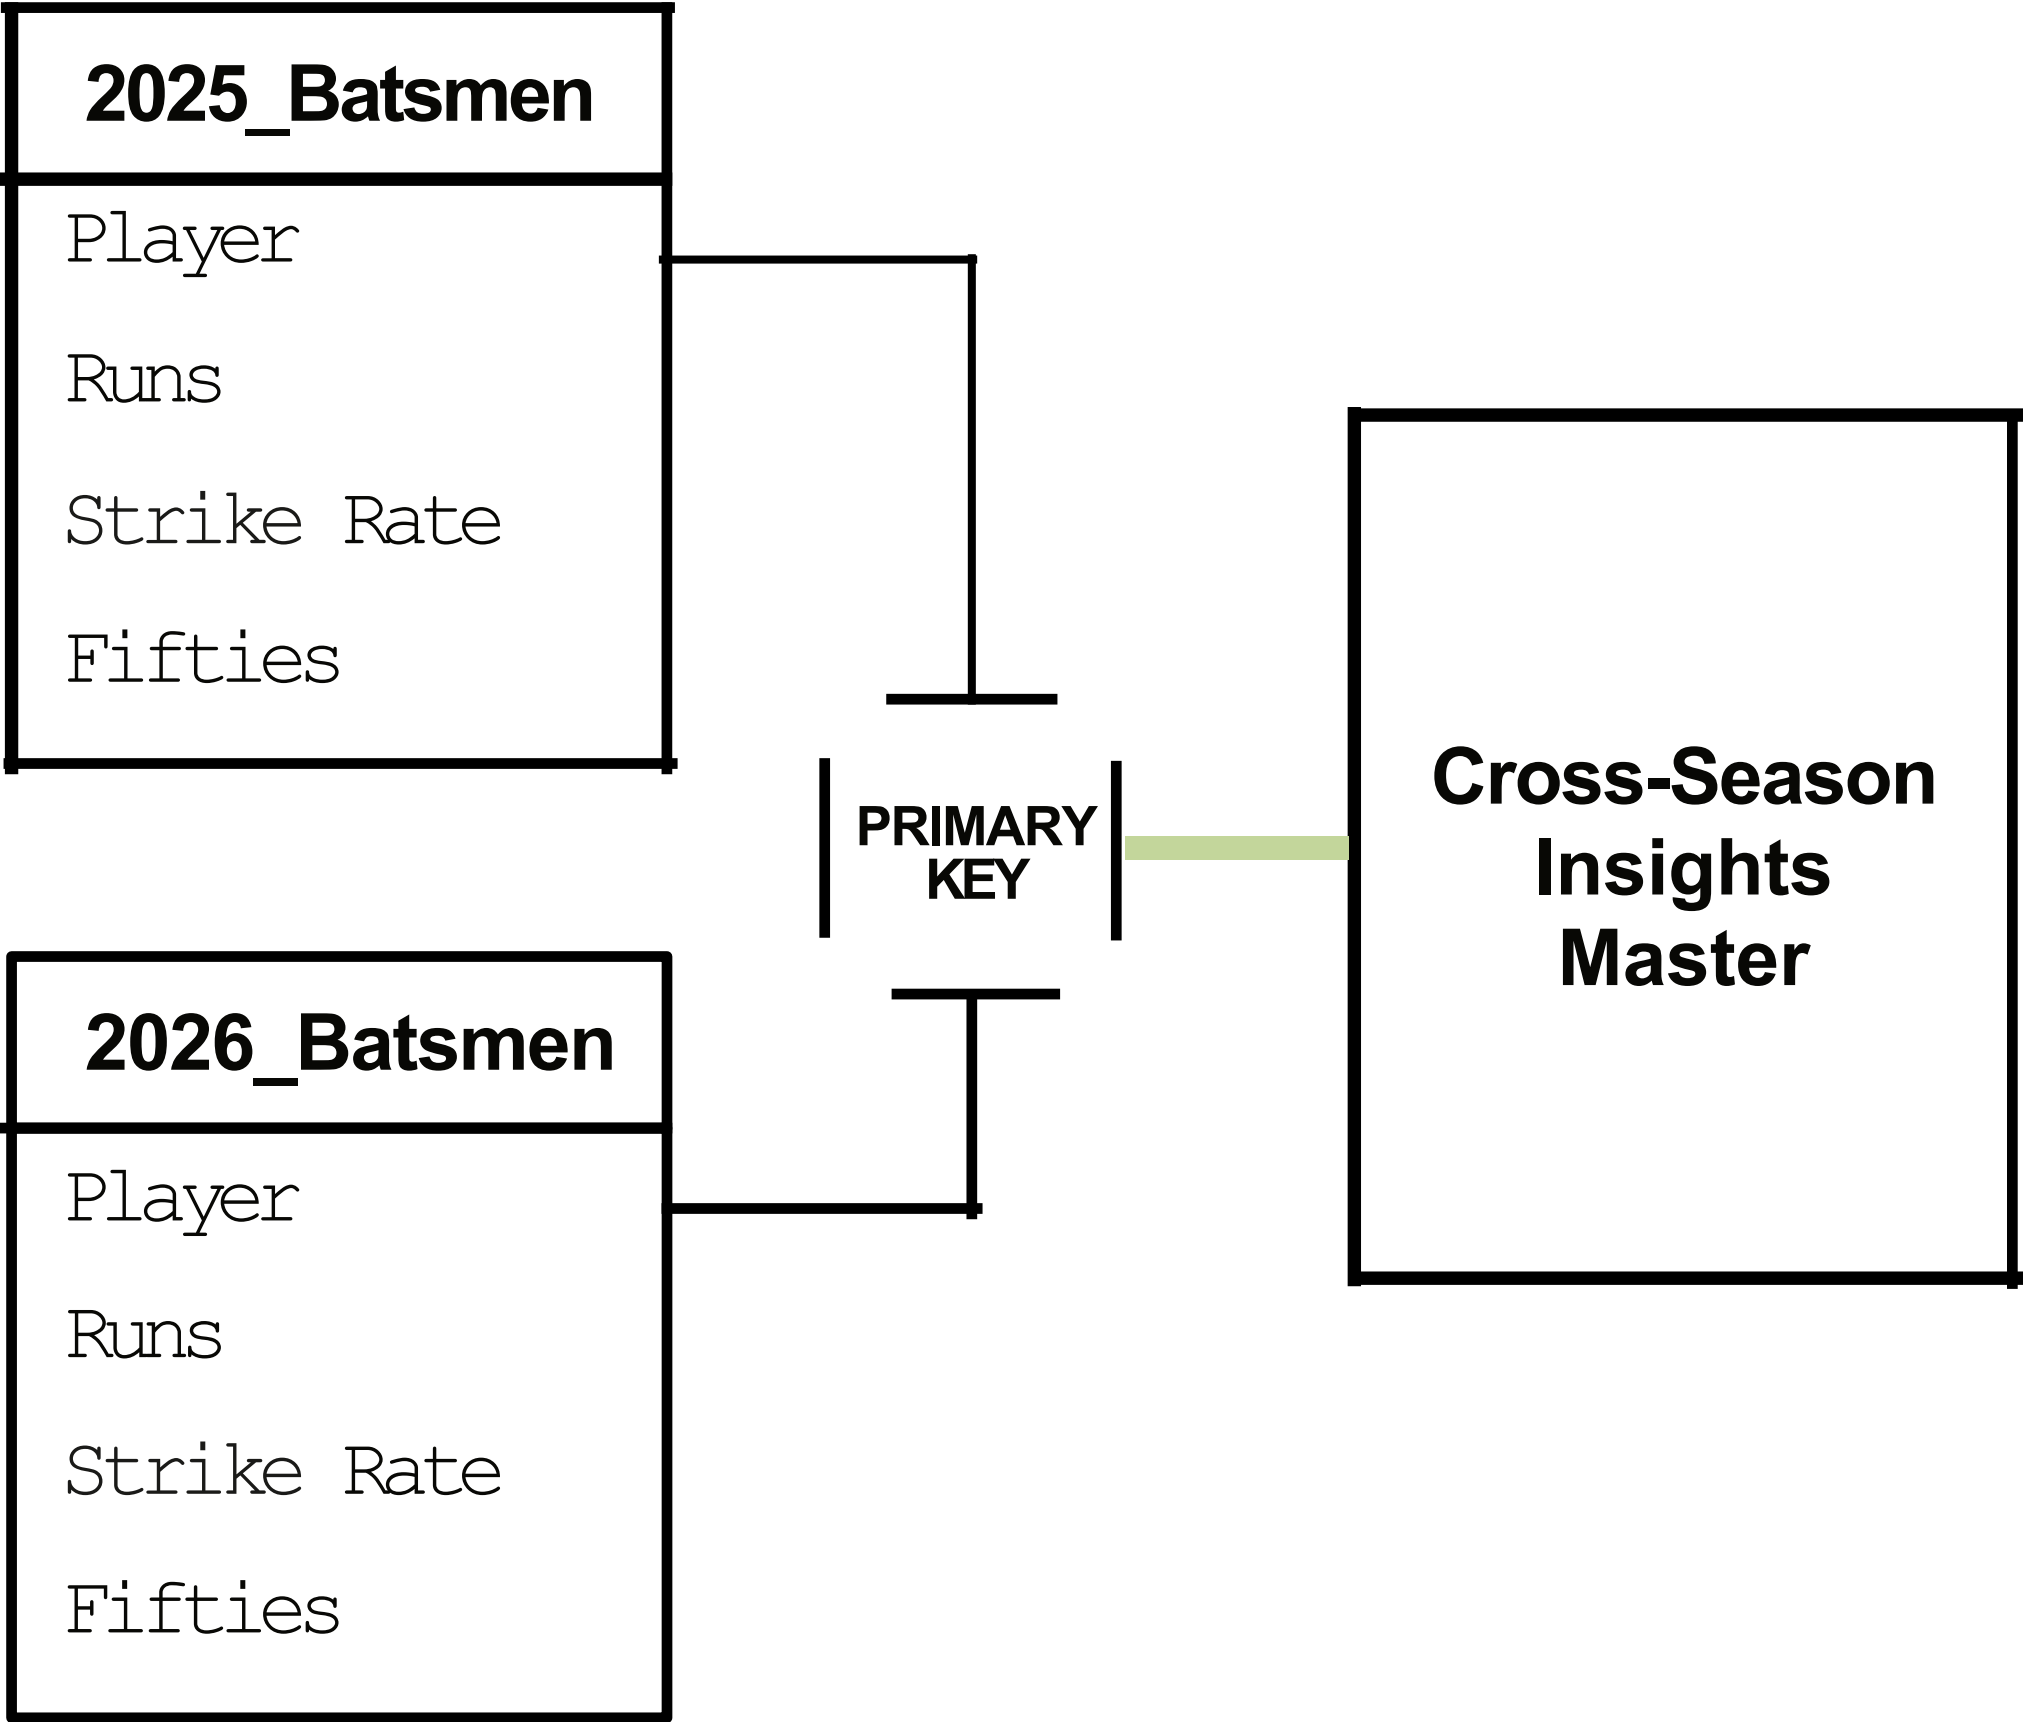

3. Who are the true outliers in cross-season consistency?

# The Architecture: Joining two years of franchise history.

To find cross-season trends,  
isolated tables aren't enough.  
I structured a relational  
workflow utilizing primary keys  
to merge player and team data  
across the 2025 and 2026  
databases.

```
INNER JOIN b USING  
(Player)
```

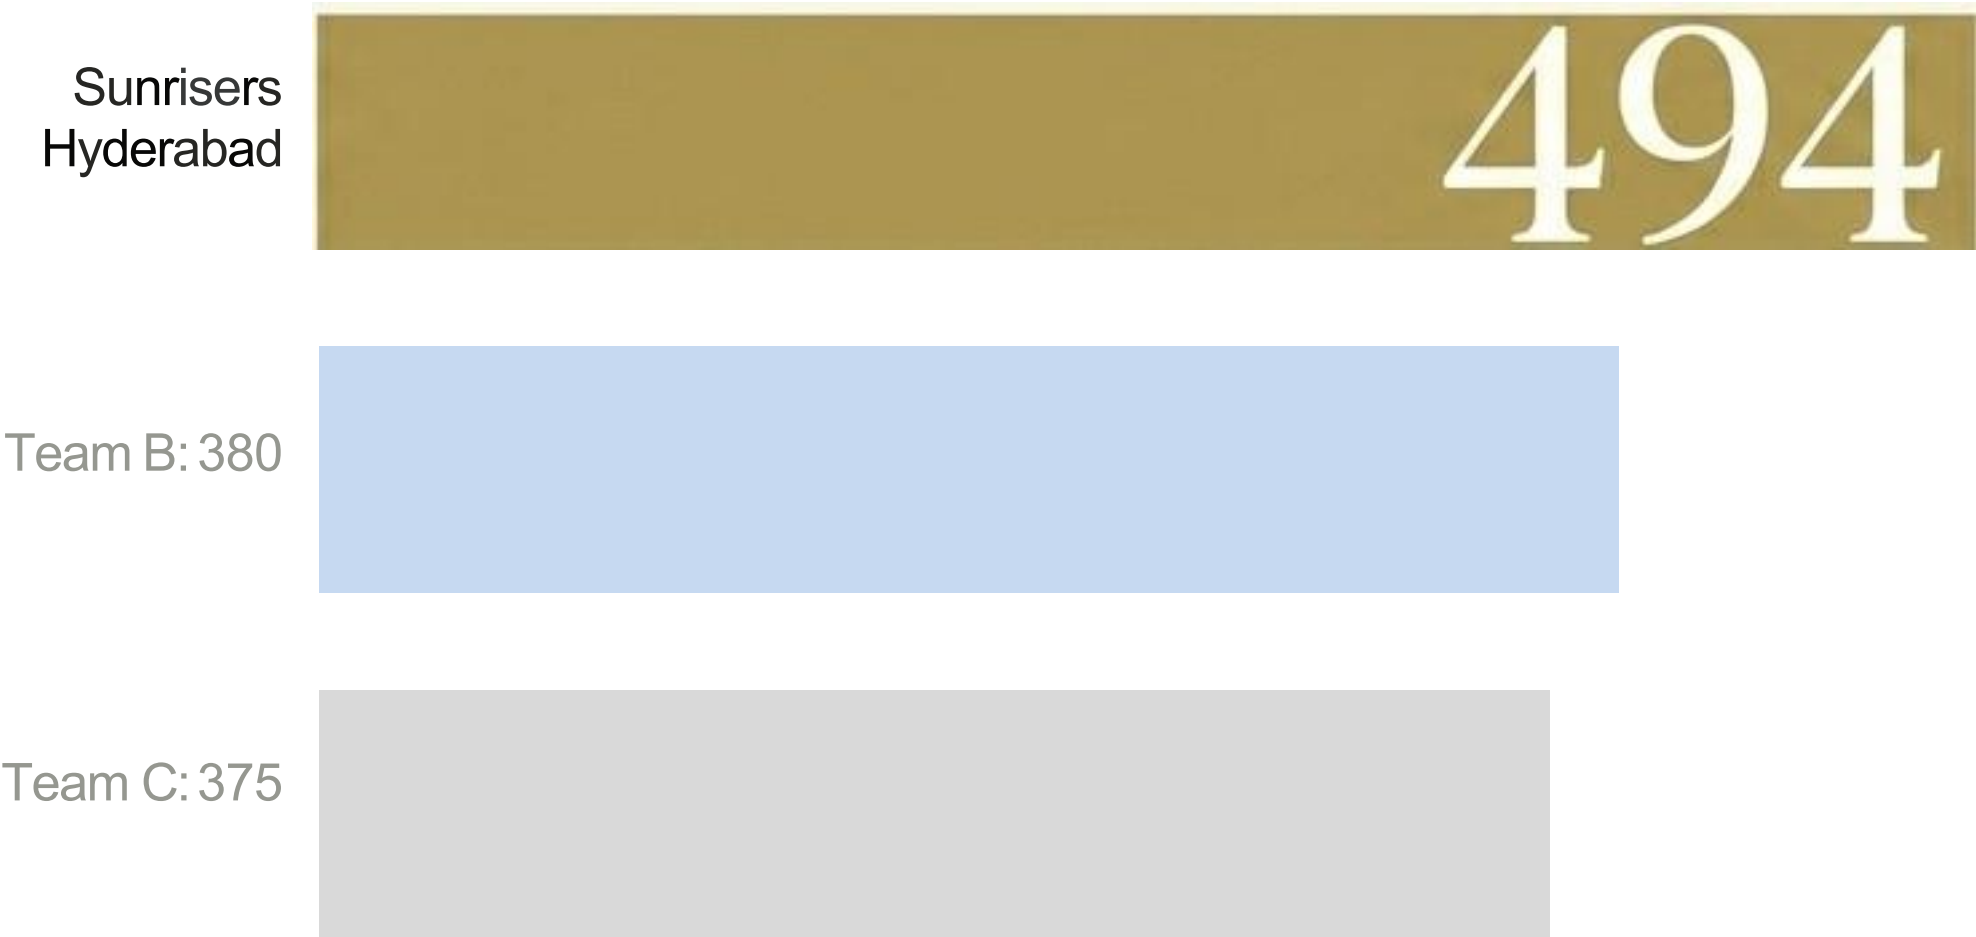

# Sunrisers Hyderabad rewrote the team batting playbook in 2026.

While the league average for team runs sat at [League Average Runs], SRH shattered the ceiling by maximizing their run tally to 494. The data points to a highly aggressive powerplay strategy compared to 2025.

```
SELECT team, runs
FROM refreshing-mark-495207-
f8.ipl_db.2026_Batsmen
ORDER BY 2 DESC
LIMIT 1;
```

| team                | runs |
|---------------------|------|
| Sunrisers Hyderabad | 494  |

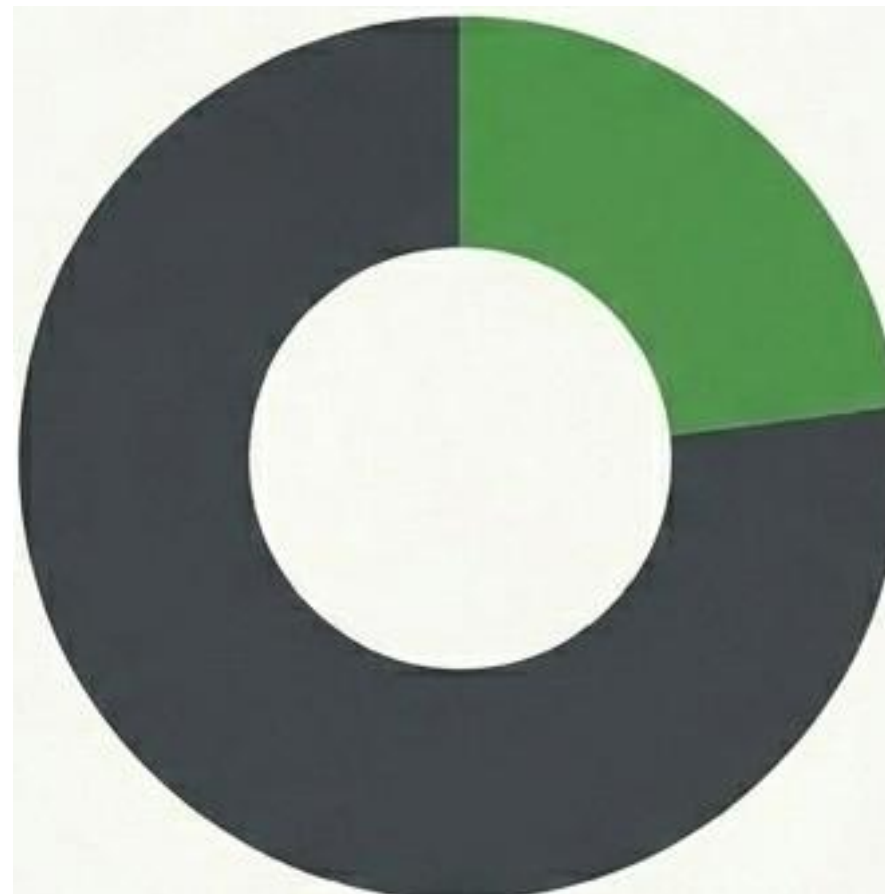

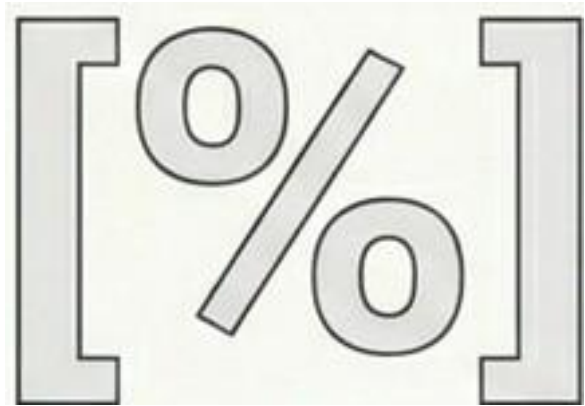

# The toss advantage was weaker than expected.

Conventional cricket wisdom states that winning the toss is half the battle. The SQL tells a different story. In 2025-2026, teams that won the toss only won the match[%] of the time, dropping to[%] in playoff scenarios.

## Myth

Expected Toss Impact

## Reality

Actual Win Rate

```
[SELECT Toss_Winner,  
COUNT (CASE WHEN Toss_Winner = Match_Winner THEN 1 END) / COUNT(*) * 100 as Win_Percentage  
FROM ipl_db  
GROUP BY Toss_Winner]
```

# One player dominated consistency across both seasons.

Flash-in-the-pan seasons are common. Sustained dominance is rare. By joining 2025 and 2026 data, B.S. Sudharsan emerges as the ultimate anchor, maintaining exceptional output across multiple metrics.

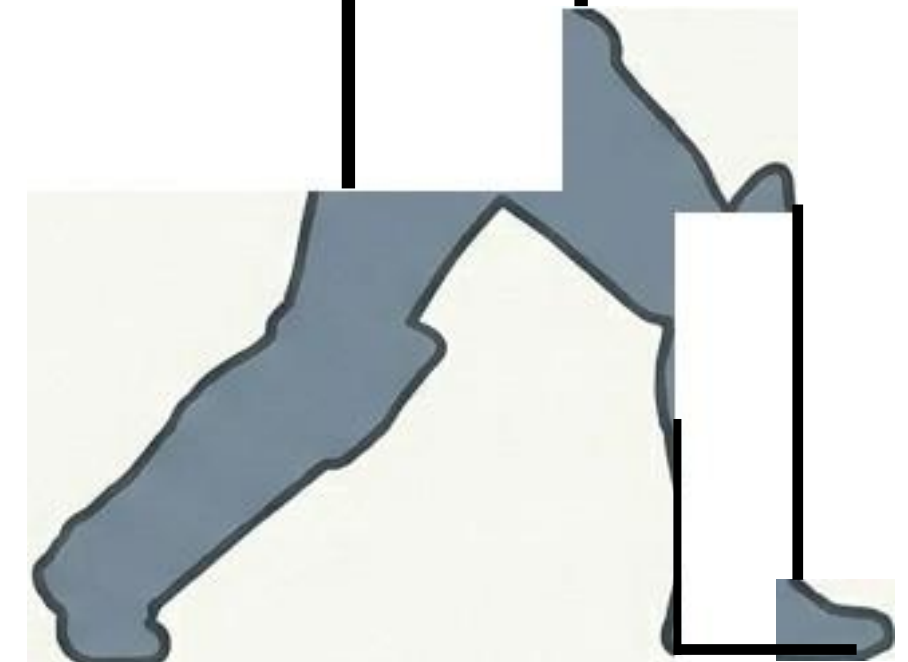

**1,199 Total Runs** Joined across 25/26 seasons

**109 Boundaries** 4s and 6s combined in 2025

**759 Runs at Peak Pace**  
Maintaining >130 Strike Rate

```
SELECT a.player, a.runs + b.runs as total_runs FROM refreshing-  
mark-495207-f8.ipl_db.2025_Batsmen a INNER JOIN refreshing-mark-  
495207-f8.ipl_db.2026_Batsmen b USING(player)  
ORDER BY 2 DESC LIMIT 1;
```

Sudharsan, BS | 1199

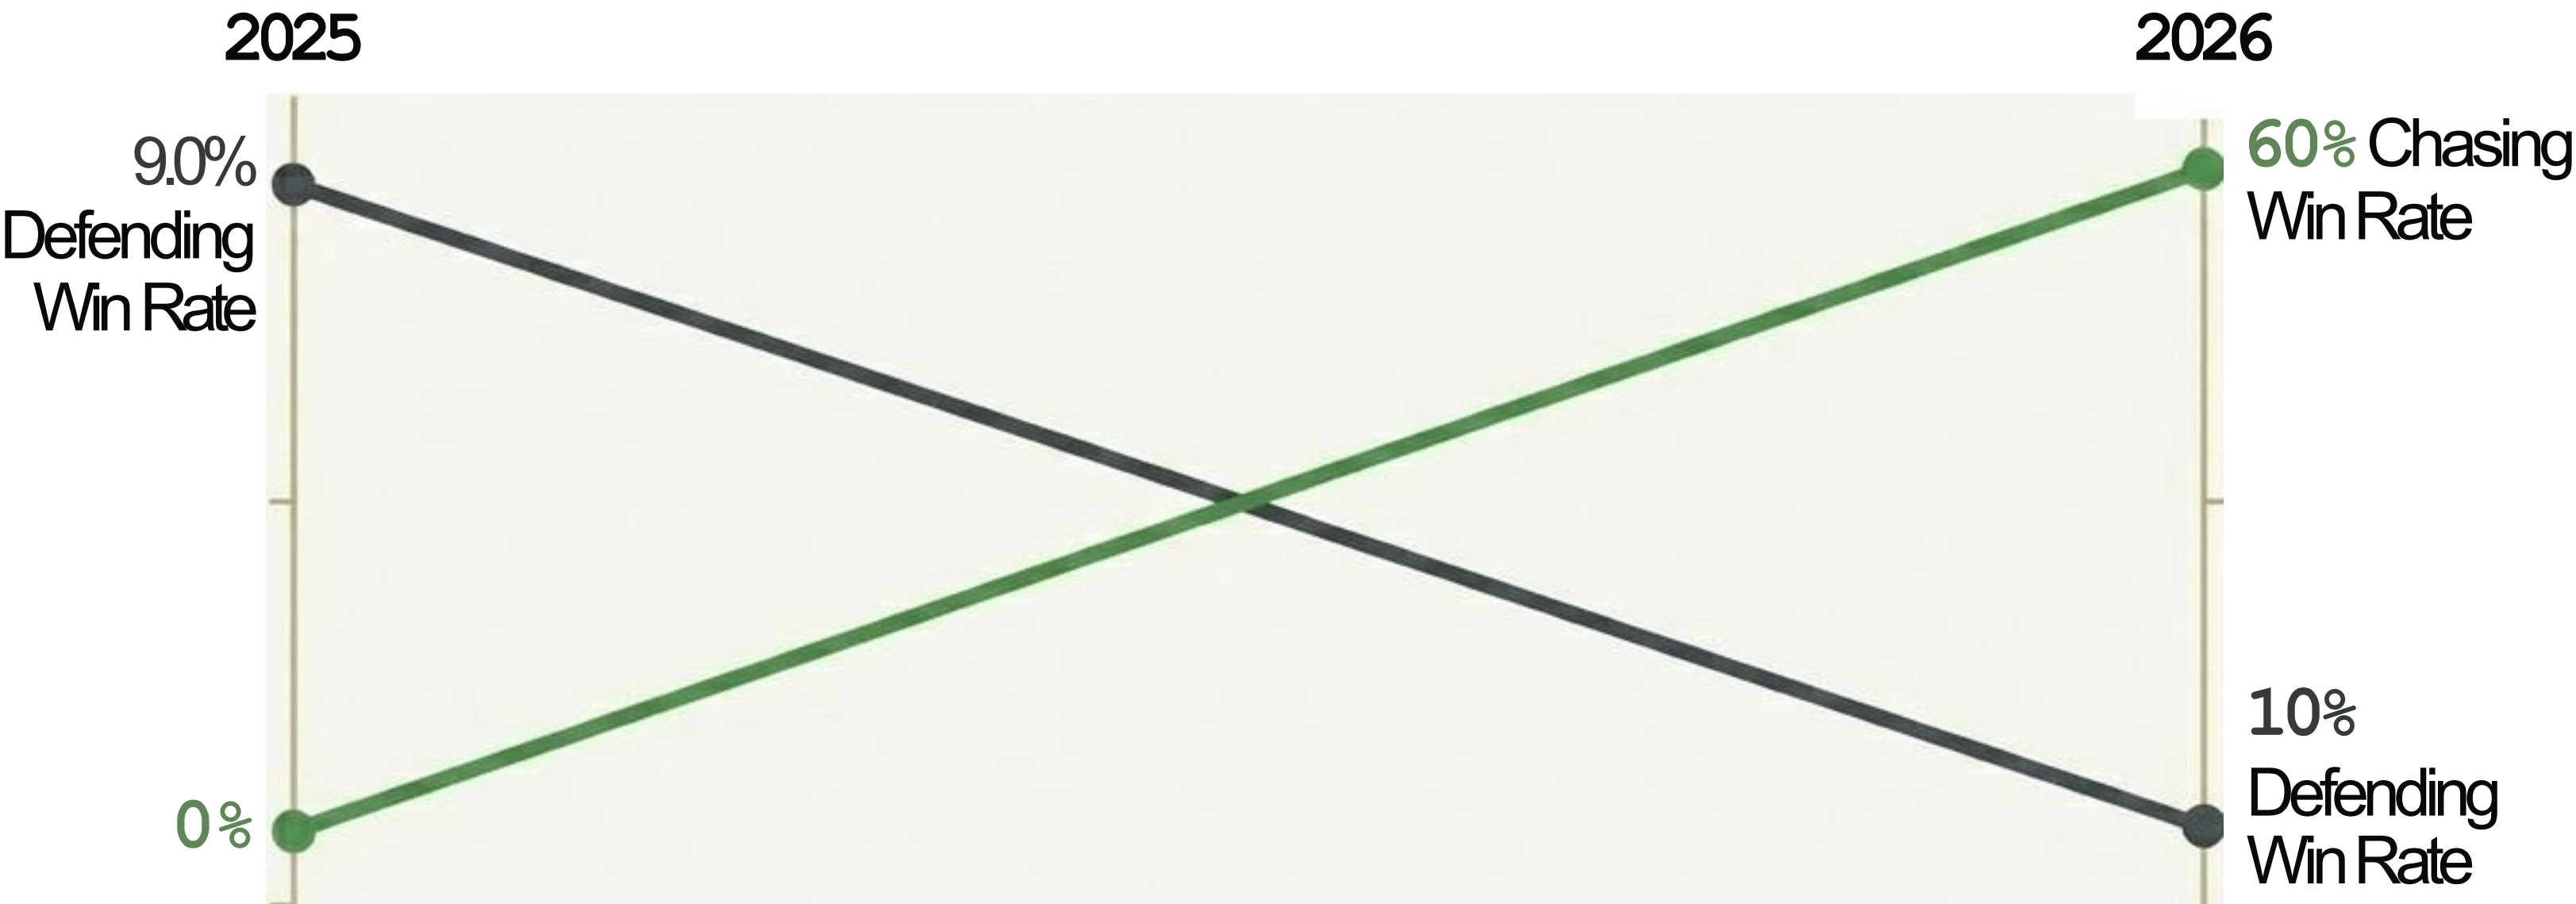

Runner up: S.lyer led with 11 combined half-centuries.

# Chasing told a very different story in 2026.

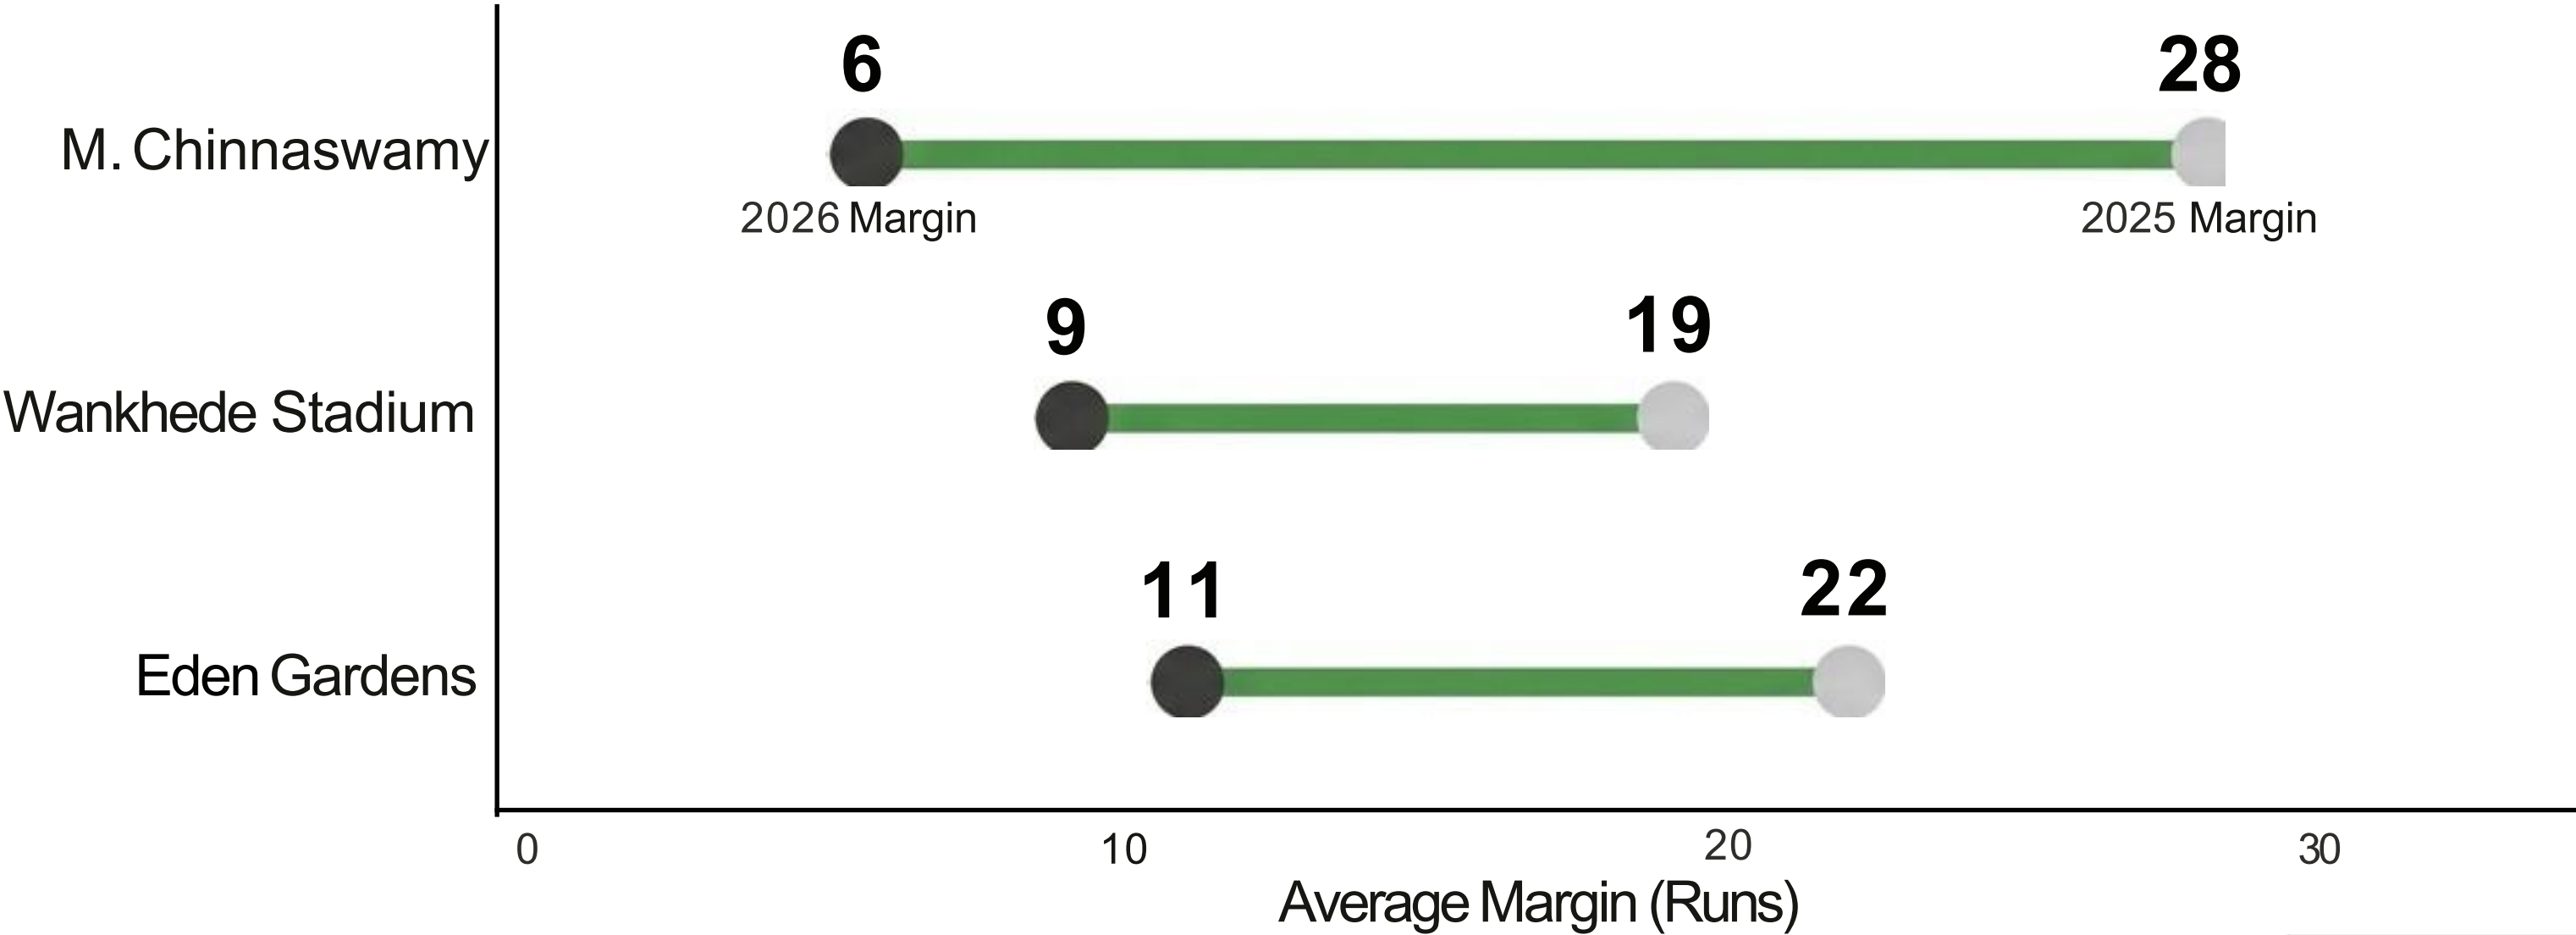

In 2025, defending a total was the safest bet, yielding a [%] win rate. By 2026, the pendulum swung. Teams chasing [Target Segment] runs or more saw their win probability jump by [%], indicating a shift in pitch conditions or chasing strategies.

```
[SELECT Year,
  Batting_First,
  COUNT(Win) FROM
  ipl_db
GROUP BY 1, 2]
```

# Fortresses fell: Home advantage shifted dramatically.

M.Chinnaswamy Stadium washistorically an impenetrable fortress. Yet, our analysis reveals adrastic change. The average margin of victory for the home team shrank from 28 runs in 2025 to just 6 runs in 2026. The gaps are closing.

```
[SELECT Venue,
AVG(Win Margin) as Avg_Margin
FROM ipI_db
GROUP BY Venue)
```

# The Analyst's Toolkit: Transforming rows into insights.

Behind every strategic sports insight is a robust, optimized query. This project utilized a comprehensive suite of SQL techniques to clean, merge, and interrogate both batting and bowling data.

## Y Conditional Filtering

```
WHERE Economy Rate <= 7
```

Isolated J.J. Bumrah's 18 wickets.

## Ⓜ Relational Joins

```
INNER JOIN b USING (Player)
```

Found S.S. Iyer's 11 cross-season fifties.

## + Mathematical Aggregation

```
(Fours + Sixes) AS Boundaries
```

Calculated Sudharsan's 109 boundaries.

## □ Row Limiting

```
ORDER BY 2 LIMIT 5
```

Identified most efficient over-bowlers (V. Arora).

# Let's turn your company's raw data into strategic wins.

I'm a Data Analyst passionate about writing clean code and extracting actionable stories. If your team is looking for someone who speaks both complex SQL and clear business strategy, let's connect.
